FIIG Change List	229

GENERAL INFORMATION

1. Purpose and Scope

This Federal Item Identification Guide (FIIG) is a self-contained document for the collection, coding, transmittal, and retrieval of item characteristics and related supply management data for an item of supply for logistical use. This FIIG is to be used to describe items of supply identified by the index of approved item names appearing in this section.

2. Contents

This FIIG is comprised of the following:

- Index of Approved Item Names Covered by this FIIG
- Applicability Key Index
- Section I - Item Characteristics Data Requirements
- Section III - New text that should be here.
- Appendix A - Reply Tables
- Appendix B - Reference Drawing Groups (as applicable)
- Appendix C - Technical Data Tables (as applicable)

a. Index of Approved Item Names Covered by this FIIG:

The index lists the approved item names with definitions and item name codes as they appear in Cataloging Handbook H6, applicable to this FIIG. In addition, each name entry is assigned an applicability key for use in relating the characteristics requirements in Section I to the specific item name.

b. Applicability Key Index:

The purpose of this index is to provide the user with a ready reference for determining the specific requirements which are applicable to a given approved item name. This index lists all requirements in sequence as they appear in the FIIG. The applicability of a Master Requirement Coded requirement is indicated by the column headed by the specific item name applicability key as follows:

(1) The letter "X" indicates the requirement must be answered for a full descriptive item.

(2) The letters "AR" indicate the requirement is to be answered as required by (1) instructional notes within the FIIG; (2) when the reply is predicated on replies to a related main requirement; or (3) when an asterisk (*) is used in conjunction with the applicability key column in Section I.

(3) A blank in the column indicates the requirement is not applicable to the specific item name.

GENERAL INFORMATION

c. Section I - Item Characteristics Data Requirements:

This section contains the physical and performance characteristics requirements needed to describe and identify an item of supply. These characteristics differentiate one item from all other items of supply and are to be used to meet the needs of all supported functions. This section is arranged in columns. Identification of each column and instructions pertinent thereto are as follows:

(1) Applicability Key:

The first column shows the applicability key(s) for each requirement. It indicates whether the requirement need be satisfied for the item being identified. "ALL" indicates that the requirement must be answered for all items covered by the FIIG. One or more alphabetic character(s) or group of one or more alphabetic characters indicates a response is required when describing items with an approved item name or names represented by the key(s). An asterisk (*) used in conjunction with any applicability key indicates that the characteristic stated in the requirement may not be applicable to all items covered by the FIIG.

(2) Master Requirement Codes (MRC):

A four-position code which is assigned to a FIIG requirement for identification of the requirement, cross-referencing requirements in the various sections and appendices of the FIIG, and for mechanized processing and retrieval of FIIG generated data. Absence of a MRC for a requirement indicates a lead-in to requirements with individual MRCs in Appendix B.

(a) The coding technique for providing MULTIPLE/OPTIONAL responses will not be used for a Section I requirement assigned Mode Code A or L that leads to Appendix B sketches with dimensional requirements.

(b) Identified Secondary Address Coding:

This technique is for extending the Master Requirement Code so that a unique address is provided for each application of the requirement in relation to the item and is authorized only as instructed within the requirement. Responses coded through this technique will always consist of the following: (1) Master Requirement Codes, (2) indicator code (a single numeric character determined by the number of positions contained), (3) identified secondary address code (1 to 3-digit alphabetic codes determined by the number of predicted replies), (4) the mode code, (5) the reply code and/or clear text response, and (6) end with a record separator (*). Steps (1) through (6) are repeated for each application of the requirement.

(c) AND/OR coding:

A technique for extending the Master Requirement Code to provide a distinctive address for multiple responses to the same requirement. Responses coded through this technique will always consist of (1) Master Requirement Code, (2) mode code, (3) the response or reply code (as instructed by the requirement), (4) a single dollar sign (\$) for an OR condition, or a double dollar sign (\$\$) for an AND condition, (5) the mode code, (6) the response or reply code

GENERAL INFORMATION

(followed by conditions (4) through (6) for each of the multiple responses) and (7) end with a record separator (*). NOTE: Apply this technique only when instructed by the requirement sample reply (e.g.).

(3) Mode Code:

A one-position alphabetic code that specifies the manner in which a response will be prepared. Each requirement assigned a MRC is also assigned a mode code. Sample replies follow each FIIG requirement displaying the proper construction of a response for the assigned mode code. The response to a requirement will always be prepared in accordance with the assigned mode code and sample reply except in the following instances:

(a) Use of E Mode Code replies is not authorized. If a reply needed to describe an item is not listed in the applicable table, contact the FIIG Initiator.

(b) Mode Code K may not be used for any requirement unless instructed by the requirement instructions.

(4) Requirement:

This portion includes the characteristics data elements and data use identifiers required to identify and differentiate one item of supply from another, narrative definitions, and explanations as to use and method of expression. Instructions for coding and preparing replies are also provided.

(5) Reply Code:

A code that represents an established authorized reply to a requirement.

d. Section III - Supplementary Technical and Supply Management Data:

This section includes those characteristics requirements necessary to support specific logistics functions other than National Stock Number assignment.

e. Appendix A - Reply Tables:

Tables of authorized replies to requirements and reply codes when the tables are too lengthy for inclusion in Section I/III, when applicable.

f. Appendix B - Reference Drawings:

This appendix contains representative illustrations which portray specific variations of one or more generic characteristics. If reference drawings contain requirements pages to be used in conjunction with illustrations for dimensioning purposes, the requirements pages will contain Master Requirement Codes, mode codes, and a statement of the requirement. A response to requirements on a requirements page is necessary only for those Master Requirement Codes applicable to the illustration selected.

g. Appendix C - Technical Data Tables:

GENERAL INFORMATION

This appendix contains conversion charts and similar data pertinent to the requirements in Section I/III, when applicable.

3. Enter administrative MRC CLQL immediately following the last FIIG requirement reply, as instructed below:

<u>MRC</u>	<u>Mode</u> <u>Code</u>	<u>Requirement</u>	<u>Example</u>
CLQL	G	COLLOQUIAL NAME (common usage name by which an item is known)	CLQLGW OVEN WIRE CLOTH*

4. Special Instructions and Indicator Definitions

a. Measurements:

Unless otherwise indicated within a requirement example, enter all measurements in decimal form, carried to the nearest three decimal places, with a minimum of one digit preceding the decimal. For SI (metric), enter all measurements with a minimum of one digit before and after the decimal. For fraction to decimal conversion, see Appendix C.

b. Indicators:

A cross hatch (#) following an AIN, MRC, Reply Code or Drawing Number indicates for "ALL EXCEPT USA" use only.

5. Indexes

a. Index of Data Requirements

This index is arranged in alphabetic sequence by Master Requirement Code, cross-referenced to the applicable data requirement and page number(s).

b. Index of Approved Item Names

This index is arranged in alphabetic sequence referenced to Applicability Key.

c. Applicability Key Index

This index is arranged in Applicability Key Sequence.

6. Maintenance

Requests for revisions and other changes will be directed to:

INDEX OF APPROVED ITEM NAMES COVERED BY THIS FIIG

INDEX OF APPROVED ITEM NAMES COVERED BY THIS FIIG

<u>Approved Item Name</u>	<u>INC</u>	<u>App Key</u>
BELT FASTENER, PLATE	16191	GC
An item consisting of two plates with bolt holes, and sufficient bolts and nuts to form, when assembled, a single belt fastening unit. Used in series with other such units to fasten together ends of power transmission or conveyor belts and to repair belt rips.		
CHAIN, BLOCK	04427	DA
A power transmission chain, consisting of laminated or solid blocks and alternate side plates held together by pins and designed in such a manner as to conform to the teeth of a sprocket wheel over which it runs.		
CLIP, SPRING, CHAIN	04483	EE
A platelike retaining spring which snaps over pin ends to lock the link plates of drive chain in place.		
IDLER SPROKET, MOUNT BOOM	39447	CA
LACING, BELT, LEATHER	15152	GB
A strip cut from tanned or untanned animal hide, the width being greater than the thickness, and used to join the ends of a conveyor or driving belt. Excludes LACING, BELT, PIN and LACES, FOOTWEAR.		
LACING, BELT, PIN	13568	GA
An item consisting of two lengths of toothed metal, or two series of wire hooks, to be attached to the ends of industrial belting in order to form an endless belt when joined by a hinge pin. May be furnished with hinge pin.		
LINK SET, CONNECTING AND OFFSET, ROLLER CHAIN	04487	EA
Two separate connecting devices consisting of a LINK, DETACHABLE LINK CHAIN and LINK, ROLLER CHAIN not assembled as a combination link.		
PIN, BELT LACING	03999	FA
A round, twisted or corrugated item, used as a connector for the ends of a belt by passing through center of meshed, curved ends of steel hooks imbedded in belt ends to produce an endless belt for power transmission.		
PLATE, CHAIN LINK	04489	ED
A side bar of various shapes forming one of the tension members of a pin link, roller chain link, or silent chain link.		

FIIG T353
GENERAL INFORMATION
INDEX OF APPROVED ITEM NAMES COVERED BY THIS FIIG

<u>Approved Item Name</u>	<u>INC</u>	<u>App Key</u>
Pulley		
1. A wheel with a flat, curved or grooved face or rim used to transmit and/or change direction of force applied by friction drive, chain, rope, belt, or other flexible band. Excludes pulleys or sheaves encased or attached to mounting devices of any nature.		
PULLEY (1), CONE	08110	BA
A pulley having two or more adjoining grooved, flat or crowned faces in steps of different diameters or one having a single tapered face. For pulleys encased in a shell or frame, see BLOCK, TACKLE.		
PULLEY (1), FLAT	08111	AB
A pulley with a straight or crowned face. The item may include belt aligning flange(s). Excludes PULLEY, CONE. For pulleys encased in a shell or frame, see BLOCK, TACKLE		
PULLEY (1), GROOVE	08109	AA
A pulley with one or more grooved faces or rims of the same diameter. For pulleys encased in a shell or frame, see BLOCK, TACKLE. For item specifically designed for aviation, see PULLEY (1), GROOVE, AVIATION		
PULLEY (1), GROOVE, AVIATION	66957	AA
An aircraft control cable system item consisting of a pulley with one or more grooved faces or rims of the same diameter.		
SPROCKET WHEEL	04456	CA
A toothed wheel whose teeth or sprockets are designed to be engaged with the links of a pitch chain, track, or the like. It is usually used for transmitting power.		
TORQUE LIMITER ASSEMBLY, MECHANICAL	40091	CB
A friction type overload device designed to slip when driven machinery is jammed. Not designed for continuous slipping. Consists of items such as fixed hub, bearings, friction discs, pressure plates, and the like. May include a micro switch.

Body

SECTION: A

APP

Key	MRC	Mode Code	Requirements
-----	-----	-----------	--------------

ALL

NAME	D	ITEM NAME
------	---	-----------

Definition: A NOUN, WITH OR WITHOUT MODIFIERS, BY WHICH AN ITEM OF SUPPLY IS KNOWN.

Reply Instructions: Enter the applicable Item Name Code from the index appearing in the General Information Section. (e.g., NAMED08109*)

ALL

STYL	L	STYLE DESIGNATOR
------	---	------------------

Definition: THE STYLE DESIGNATION INDICATING THE CONFIGURATION THAT MOST NEARLY CORRESPONDS TO THE APPEARANCE OF THE ITEM.

Reply Instructions: Enter the applicable group designator and style number from [Appendix B](#), Reference Drawing Group A. (e.g., STYLLA12*)

Grooved, stepped hubs, or bore will not be considered in determining styles.

ALL

ARJD	D	DESIGN FORM
------	---	-------------

Definition: THE PHYSICAL CONFIGURATION OF THE ITEM.

Reply Instructions: Enter the applicable Reply Code from the table below. (e.g., ARJDDAAM*; ARJDDAAM\$DADF*)

REPLY CODE

AAM
ADF
ADG

REPLY (AL52)

PLAIN
SPOKED
WEBBED

NOTE FOR MRC BXSH: REPLY TO THIS MRC, IF REPLY CODE ADF OR ADG IS ENTERED FOR MRC ARJD.

FLAT AND GROOVED PULLEYS AND SPROCKET WHEELS

INDEX OF MASTER REQUIREMENT CODES

NOTES:

1. FOR INC 08109, IF U SHAPED GROOVE, DO NOT REPLY TO MRC AGJS.

WHEN MRC AGJS IS SELECTED AND THE PULLEY UTILIZES A OR B BELTS, SPECIFY TWO NOMINAL PITCH DIAMETER. (e.g., AGJSJAA5.000\$\$JAA5.400*)

2. FOR INC 08111, DO NOT REPLY TO MRC AGJS.

Enter the applicable Reply Codes from Tables 1 and 2 below, followed by the numeric value. (e.g., ABHPJAA6.500*, ABHPJLA162.4*; ABHPJAB6.250\$\$JAC6.750*)

The following priority will be used to determine AA end of hub:

First	the stepped hub end
Second	the grooved hub end
Third	the longest hub end
Fourth	the largest diameter hub end
Fifth	end having external keyway
Sixth	recessed end (Style 4 only)
Seventh	longest or deepest
Eighth	largest diameter

The remaining end will be designated as BB end.

ABKU	J	FLANGE THICKNESS
AGJS	J	PITCH DIAMETER
AHTC	J	FLANGE OUTSIDE DIAMETER
AQPL	J	FACE WIDTH
BYZG	J	DISTANCE FROM PILOT END TO FLANGE FACE

NOTE:

1. FOR INC 04456, IF REPLY CODE AAG OR AAH IS ENTERED FOR MRC BYDZ IN SECTION I, PART C, DO NOT REPLY TO MRCS BYZD AND BYZF FOR THE STYLE ENTERED IN REPLY TO MRC STYL.

Enter the applicable Reply Codes from Tables 1, 2, and 3 below, followed by the numeric value. For items with only one protruding hub, the protruding hub end will be considered the AA END. For items with two protruding hubs, use AND CODING (\$\$) entering replies to AA END first. Refer to priority listing above to determine AA END of hub. (e.g., BYZDJAABBZ3.250*; BYZDJLAHH257.4*; BYZDJAABBZ0.380\$\$JAABCA0.375*; BYZDJABBBZ4.250\$\$JACBBZ8.500*)

<u>ITEM NAME</u>	<u>STYLE</u>
PULLEY, PLAIN	1, 2, 3,13
PULLEY, WEBBED OR	4 through 12 and 14 through

Enter the applicable Reply Codes from Tables 1, 2, and 3 below, followed by the numeric value. For items with only one protruding hub, the protruding hub end will be considered the AA END. For items with two protruding hubs, use AND Coding (\$\$) entering replies to AA END first. Refer to priority listing below to determine the AA END of hub. (e.g., BYZDJAABBZ3.250*; BYZDJLABBZ75.8*; BYZDJABBBZ3.250\$\$JACBBZ4.000*)

The following priority will be used to determine AA End of HUB:

First	the stepped hub end
Second	the grooved hub end
Third	the longest hub end
Fourth	the largest diameter hub end
Fifth	end having external keyway
Sixth	recessed end (Style 4 only)
Seventh	longest or deepest
Eighth	largest diameter

The remaining end will be designated as BB END.

<u>REPLY CODE</u>	<u>REPLY (AA05)</u>
A	INCHES
L	MILLIMETERS

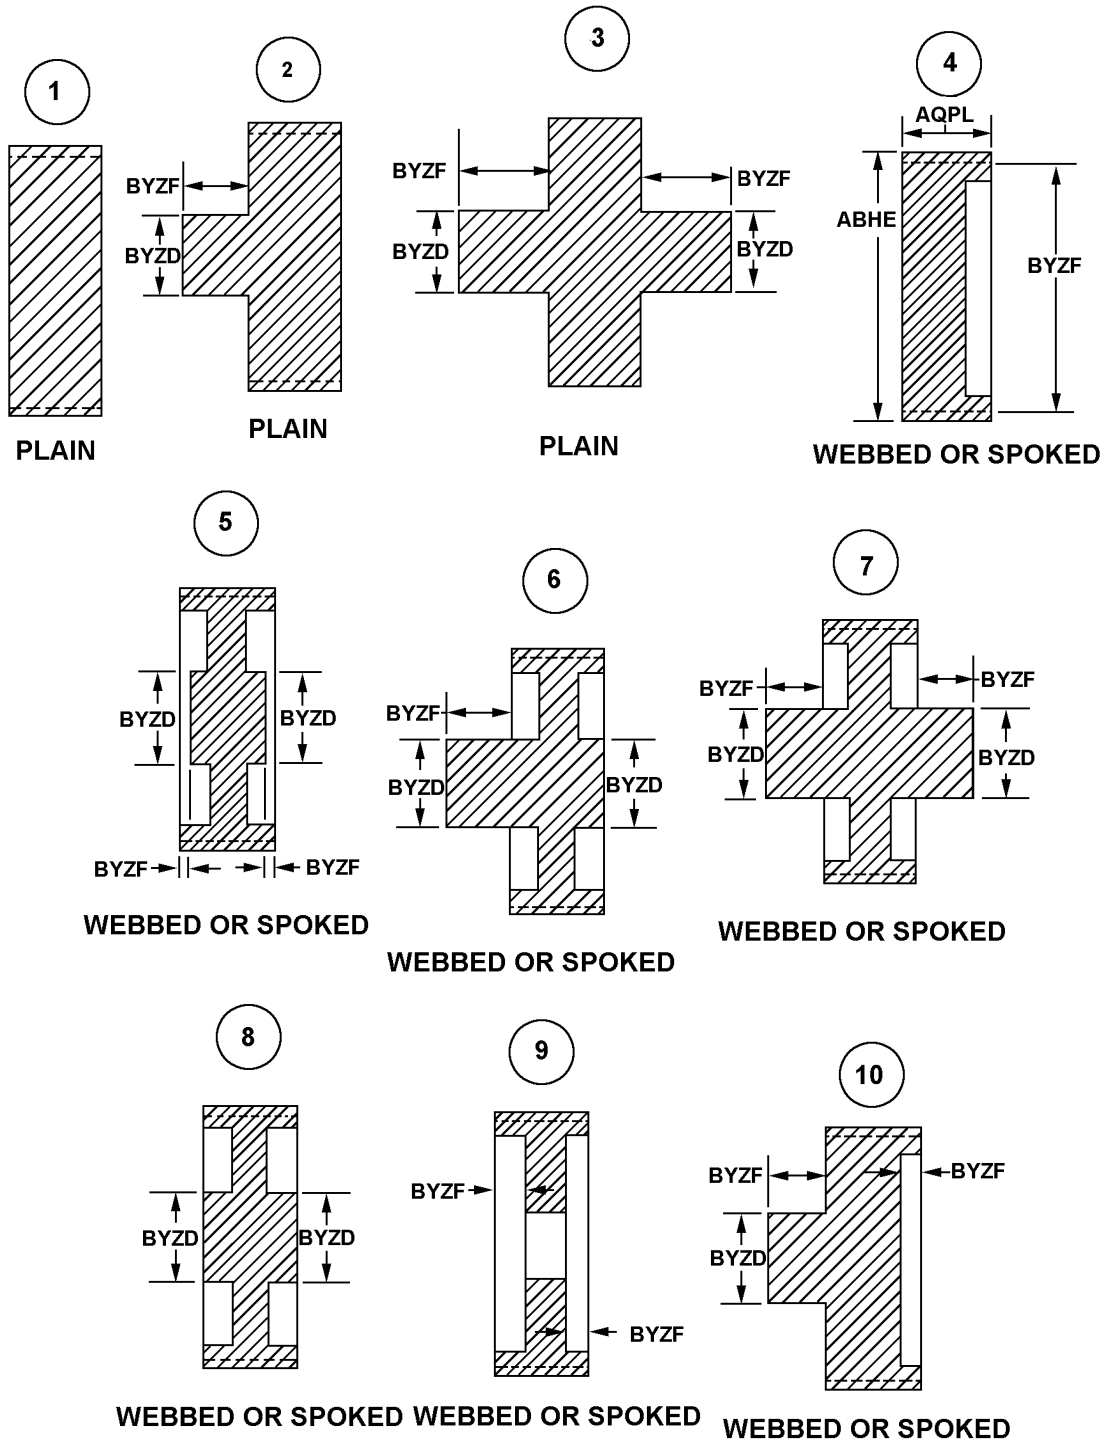

<u>REPLY CODE</u>	<u>REPLY (AC20)</u>
A	NOMINAL
B	MINIMUM
C	MAXIMUM

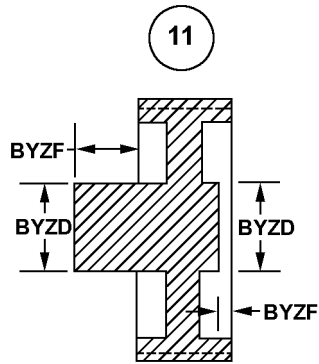

<u>REPLY CODE</u>	<u>REPLY (AJ91)</u>
BBZ	AA END
BCA	BB END
AHH	BOTH ENDS

<u>MRC</u>	<u>Mode Code</u>	<u>Name of Dimension</u>
BYZD	J	HUB END OUTSIDE DIAMETER AND LOCATION
BYZF	J	DISTANCE FROM OUTSIDE FLANGE/RIM TO HUB END AND LOCATION

STANDARD FRACTION TO DECIMAL CONVERSION CHART	228

HUB END PRIORITY SEQUENCE

The following priority shall be used to determine the AA END of hub:

First	the stepped hub end
Second	the grooved hub end
Third	the longest or protruding hub end
Fourth	the largest diameter hub end
Fifth	end having external keyway
Sixth	recessed end
Seventh	longest of deepest counterbore
Eighth	largest diameter counterbore

The remaining end shall be designated the BB END.
